

VendorHub — Feature Update

Summary of new features and improvements

1. Notifications

- A notification bell on every page that updates instantly, no need to refresh
- Customers and vendors get notified about new quotes, new messages, new reviews, and account updates
- Unread counters next to Quotes and Inbox in the menu

2. Chat / Inbox

- Live chat between customers and vendors
- Online / offline status shown in real time
- Customers and vendors can send photos, videos, and PDF files in chat
- Files can be viewed directly inside the chat, and downloaded
- New quote requests and quote replies show up as easy-to-read cards in the chat
- Each conversation shows how many unread messages it has, like WhatsApp
- Clicking "Message" on a quote takes you straight to that conversation

3. Quotes and Orders

- Clear status for every quote: New, Quoted, Accepted, Delivered, Completed
- Vendor marks a job as "Delivered" once the work or product is ready
- Customer must confirm the work was actually delivered before it counts as "Completed"
- If the customer does not respond within 7 days, the order completes automatically
- If something is wrong, the customer can report the issue instead of confirming — this pauses the automatic completion and sends it to our team to review

4. Reviews and Ratings

- Customers can only leave a review after a job is actually completed, not before
- One review per completed job — but a customer can still review a vendor again after a new, separate job is completed
- Vendors can flag a review they believe is unfair or fake, for our team to check
- Our team can review flagged items and either remove or restore them
- Vendors can filter their reviews by rating (for example, "4 stars and up")

5. Catalogue and Search

- Vendors can list both services and physical products in their catalogue
- The Explore page sorts nearby vendors based on the customer's location
- Vendor profile pages show a quick summary of their quote activity (pending, active, completed)

6. Admin Tools

- Approve, reject, or suspend vendor accounts, with automatic notifications sent to the vendor
- Review and resolve flagged reviews
- Review and resolve customer-reported delivery issues (disputes)

7. General Improvements

- Fixed several display and layout issues across the site
- Improved filters, search, and page loading behaviour
- General cleanup and bug fixes based on testing

Prepared for review. Happy to walk through any of these features live or answer questions.
